

BagDrop

COMPANY PROFILE

Smart luggage storage for retail destinations

VENUE PARTNERSHIPS

For shopping centres, transport hubs and high-footfall destinations

Secure, cashless, self-service luggage lockers — installed, operated and maintained at no capital cost to the venue.

8Venture Co., Ltd.

Who we are

BagDrop operates secure, app-controlled luggage lockers in high-footfall destinations across Bangkok. We fund, install and operate the units entirely at our own cost.

International visitors arrive at shopping destinations carrying luggage — between a hotel checkout and an evening flight, on the way in from the airport, or between accommodation. Carrying a suitcase through a mall is uncomfortable, so those visitors either shorten their visit or skip it altogether. Every one of them is a shopper the venue has already attracted but cannot fully serve.

BagDrop removes that barrier. A visitor stores their bag in under a minute using a phone, pays by card or PromptPay, and moves through the venue hands-free. There is no counter, no staff, no queue, and no cash on site.

What we bring to a venue

No capital cost to the venue	We fund the hardware, installation, connectivity and fit-out in full.
Revenue from unproductive space	Designed for outdoor, transitional and back-of-house areas that are difficult to lease conventionally.
Longer dwell time	A shopper without luggage stays longer and spends more.
A service, not just a tenant	An amenity the venue can promote to international visitors and tour operators.
Unstaffed and cashless	No cash handling, no staff presence, no queue forming in a public area.
One electrical outlet — nothing else	That is the full extent of what we need from the venue.

Company status

8Venture Co., Ltd. (บริษัท 8เวนเจอร์ จำกัด) is a Thai private limited company registered under number 0105569178707, with registered capital of THB 1,000,000. Registered office: 52/88 Tower Park Building, 17A Floor, Soi Sukhumvit 3 (Nana Nuea), Khlong Toei Nuea, Watthana, Bangkok 10110. The company is the contracting party for all agreements described in this document.

The opportunity

Bangkok is the world's most-visited city. Its visitors arrive with luggage, spend heavily, and have nowhere convenient to put their bags.

international visitor in Bangkok

Source: Ministry of Tourism and Sports, September 2026. Bangkok recorded approximately 32.4 million international visitors in 2024, ranking first globally.

Why this matters to a retail destination

Almost every inbound itinerary contains a gap — the hours between hotel checkout and a late departure, or between arrival and check-in. Those are prime shopping hours, and they are the hours a visitor is least able to shop. Someone wheeling a suitcase does not browse, try clothes on, or linger over a meal. They pass through, or wait it out somewhere else.

The gap in the current offer

Luggage storage in Bangkok today is fragmented — cash-only coin lockers at transit stations, staffed counters with limited hours, and hotel arrangements that require going back to the hotel. None of it is a modern, cashless, self-service option placed where international shoppers actually spend their time.

Where we fit

Existing luggage services serve the traveller who planned ahead. BagDrop serves the shopper who didn't.

Airport-to-hotel luggage delivery is a planned service, and a good one. That customer has a booking, a schedule and the patience for a counter, a tag and a receipt.

Our customer decides in the moment. At three in the afternoon, holding four shopping bags and a cabin case with three hours before a flight, they decide they no longer want to carry them. That person will not cross the venue to queue at a booth for a two-hour drop. They carry the bags and leave early.

That demand is not currently being divided between operators. It is being lost. The visitor shortens their visit, and the venue loses the trading hours that would have followed.

Two different products

STAFFED COUNTER

A destination

- Must concentrate throughput to cover a salary
- Can exist at one point in the building
- Requires the visitor to plan, and to travel to it
- Occupies leasable retail area
- Constrained to staffed hours

UNMANNED LOCKERS

An intercept

- Covers only its own hardware and power
- Sits at three or four capture points across a venue
- Meets the visitor where the decision is actually made
- Occupies space that cannot be conventionally leased
- Available throughout trading hours, unattended

Why this matters at a large destination

Large centres and transport hubs have multiple entrances, towers and floors. A visitor arriving at one end of that footprint will not walk its length to reach a single point of service. Capture has to happen where visitors enter and where they tire — several small installations, not one large one.

What this means commercially for the venue

We are not asking the venue to choose between two occupiers for one slot. We are asking whether space that currently earns nothing — a terrace, a link-bridge landing, a corridor end near a service core — is worth monetising. That is a different line on the venue's P&L, and it does not reallocate any area already generating rent.

How it works

STEP 01

Scan and select

The visitor scans a QR code on the unit or opens the BagDrop web app. No download or account is required.

STEP 02

Pay and store

Payment by international card or PromptPay. A door opens; the visitor receives a PIN by SMS and on screen.

STEP 03

Return and collect

The PIN reopens the door at any time. Duration is billed automatically, subject to the daily cap.

Unit specification

ITEM	SPECIFICATION
Configuration	20 large storage slots per bank, sized for full-size suitcases
Footprint	Approximately 5–7 sqm including user access clearance
Height	2.0–2.2 m, below standard sightline obstruction
Power	Single-phase 220V, under 1 kW continuous draw
Connectivity	4G with optional wired backup; no venue IT integration required
Payment	Card and PromptPay only. No cash accepted or held on site.
Interface	Touchscreen and QR. English, Thai and Simplified Chinese.
Finish	Corporate livery to venue approval; suitable for sheltered outdoor installation
Installation	Freestanding modular units, surface-mounted power, no fixed fit-out — relocatable within the venue without making good

Indicative specification. Final dimensions, finish and siting confirmed with the venue's design and technical teams before manufacture.

Pricing to the visitor

Hourly rate	THB 50 per hour
Daily cap	THB 300 — the maximum any single storage can cost in one day

The cap is deliberate. A visitor storing luggage from morning checkout to a late flight knows the cost upfront, which is what converts a hesitant user into a paying one.

How we run it

The venue's teams should never need to think about the unit. Everything below is our responsibility and our cost.

Service standards

- Remote monitoring of every door, lock and payment terminal, 24 hours a day
- Fault response on site within 4 hours during trading hours
- Physical inspection weekly, scheduled outside peak trading
- Exterior cleaning by arrangement with the venue's existing cleaning round
- In-app fault reporting, which blocks an affected locker remotely until serviced
- Scheduled preventive maintenance every quarter
- Customer support by phone and messaging during operating hours

Security

- Individually locked steel compartments with tamper detection
- Full audit trail of every open and close event, retained and available to the venue on request
- Integration with venue CCTV coverage where available
- No cash on site, removing the cash-handling risk associated with coin lockers

Risk and liability

- Public liability insurance naming the venue as an interested party
- Stored-goods cover to a stated per-item limit, disclosed to the user before payment
- Published prohibited-items policy covering hazardous goods, perishables, valuables and animals
- Defined abandoned-property procedure with escalation to venue security

Data and compliance

- Personal data handled in accordance with the Personal Data Protection Act
- No card data stored; all payments processed by a licensed Thai gateway
- VAT-registered and tax-compliant as a Thai juristic person
- Anonymised usage reporting shared with the venue monthly

What we ask from the venue

A single-phase power connection, an agreed siting location, and access for installation and scheduled servicing. No staffing, no capital contribution, and no operational involvement.

Commercial approach

The venue earns from space that currently generates nothing, with no capital outlay and no operational involvement. We are open on how that is structured.

TERM	PROPOSAL
Structure	To be agreed. We are open to a licence fee, a share of storage revenue, or a combination — whichever suits the venue's preferred treatment of the space.
Initial term	3 years, with a renewal option
Capital contribution	None. BagDrop funds hardware, installation and fit-out in full.
Operating costs	Borne by BagDrop — power, connectivity, cleaning and maintenance
Reporting	Monthly revenue statement, transaction-level backup on request
Early termination	The venue may terminate on 90 days' notice for redevelopment or relocation, with a contribution to relocation costs

Indicative site performance

Storage revenue from one 20-slot bank occupying 5–7 sqm of otherwise unleased space. These figures are the basis on which we would discuss terms.

OCCUPANCY	SLOTS IN USE	MONTHLY REVENUE	ANNUAL REVENUE
15% — conservative	3.0 of 20	≈ THB 54,750	≈ THB 657,000
20% — base case	4.0 of 20	≈ THB 73,000	≈ THB 876,000
25% — upside	5.0 of 20	≈ THB 91,250	≈ THB 1,095,000

Modelled projections, not guarantees. Occupancy is the average share of slots in use across a 12-hour trading day, priced at THB 50 per occupied slot-hour over 365 trading days. Actual performance depends on siting, visibility and seasonal demand. Full model available on request.

Structured so the venue carries no risk

BagDrop funds the hardware, installation and removal in full, and shares complete usage and revenue data at a formal review in month six. The units are freestanding and relocatable, so if a location does not work the answer is to move it rather than to remove it. The venue commits no capital, no staffing and no operational involvement — only space that is not currently earning.
